## INSTALLATION PROCEDURES FOR REPLACING PLASTIC TUB COVER AND BLEACH SYSTEM

A new tub cover with integrated bleach cup replaces the current tub cover and associated bleach system. The new tub cover assembles to the tub in the same manner as the current tub cover (Figure 1). The new bleach funnel will also snap into the washer cover in the same method as today (Figure 2).

When replacing the old system with a new tub cover and bleach funnel, the pressure housing take-off must be capped off with the cap and clamp provided (Figure 3). A wire tie is also provided for tying the wiring harness to the rod support. This tie prevents the harness from being pinched by the tub cover and the screw that attaches the rod support to the apron (Figure 4). Please cut and discard the excess length after tightening the wire tie in place. Also discard old bleach system components.
